

## Mobile Container Terminal Choctaw, AL

### PROJECT PORTFOLIO

**Product:**

***Aquaduct 15" FRP trench drain with ductile iron slotted grates***

The Mobile Container Terminal is an expansion of the Alabama State Port Authority Dock Facilities in Mobile, Alabama.

The waterfront area is prone to ponding. The trench drainage system would prevent run off water from the different equipment and from any storms that come through the area.

A 15" FRP trench drain with ductile iron grates was chosen to remedy the ponding issues for this job and met all the hydraulic capacity, corrosion resistance and loading requirements for the new docking terminal.
