

United Nations North Lawn Conference Bldg. New York, NY

PROJECT PORTFOLIO

Product:

8" Custom Fiberglass trench drain with ADA grates

The United Nations (UN) North Lawn Conference Building was designed to be a recyclable building with permanent floors and drainage for almost all of the UN Headquarters' conference facilities.

The engineers designing the conference area for the UN North Lawn Conference Building needed drainage to remove rainwater from the pedestrian area, but a standard drainage solution would not suit the job.

ACO's custom 8" Fiberglass trench drainage system with ADA grates were chosen because of their custom size and versatility.

Additionally, the ADA grates provided a safe walking surface for pedestrians as well as providing adequate surface water catchment.
